

## **LASER CATARACT SURGERY NOW AT BERNITSKY VISION!**

Dr. Bernitsky is pleased to announce the introduction of Laser cataract and lens replacement surgery, now available in Albuquerque for the first time!

The revolutionary precision of femtosecond technology – first brought to New Mexico by Dr. Bernitsky for the advancement of LASIK – has now been applied to cataract and lens replacement surgery. Dr. Bernitsky of Bernitsky Vision is the first physician in the region to offer this safe and proven technology.

The Femtosecond laser replaces the mechanical blades used in traditional cataract surgery with bladeless, computer-driven, focused laser pulses. This platform allows Dr. Bernitsky to plan and perform your cataract surgery to customized, individualized specifications unattainable with other surgery methods.

If you have cataracts, or suffer from cloudy or hazy vision, call Dr. David Bernitsky today to learn more about your options.
